**DETAILED ACTION**

***Restriction/Election***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-27, 29 drawn to a method for creating a nucleic acid multiplex, classified in class 435, subclass 88.

II. Claims 31-34, drawn to a triplex, classified in class 536, subclass 22.1.

III. Claims 35-48, drawn to a quadruplex, classified in class 536, subclass 22.1.

IV. Claims 28, 49, 51-54, drawn to a method for detecting a triplex, classified in class 435, subclass 6.

V. Claims 30, 50, and 55, drawn to a method for detecting a quadruplex, classified in class 435, subclass 6.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product as claimed in Group II can be used in cloning, or purification assays.

Inventions III and I are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP

Art Unit: 1637

§ 806.05(h)). In the instant case the product as claimed in Group III can be used in cloning, or purification assays.

Inventions in Group II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the products of Group II and III can be used independently from each other because the products of Groups II and III are two different products and have different functions and different modes of operation.

Inventions in Group IV and V are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the method steps of Group IV and V can be used independently from each other because the end result of the method steps in Groups IV and V yield different results and have different functions.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and divergent subject matter, restriction for examination purposes as indicated is proper.

Should applicant traverse on the ground that the sequences are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the sequences to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Art Unit: 1637

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Suryaprabha Chunduru whose telephone number is 703-305-1004. The examiner can normally be reached on 8.30A.M. - 4.30P.M, Mon - Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gary Benzion can be reached on 703-308-1152.
